

SIDDHESHWAR KHANDARE

+91 9322949020 | khandaresiddheshwar5@gmail.com | [LinkedIn](#) | [GitHub](#) | Chhatrapati Sambhajnagar, Maharashtra

PROFESSIONAL SUMMARY

Final-year Computer Science and Design student specializing in machine learning and backend development, with hands-on experience building computer vision models and REST APIs. Skilled in Python, FastAPI, and Scikit-learn, with working exposure to Generative AI and vector databases. Seeking an entry-level Software role to apply production-oriented engineering skills and grow within a fast-paced team.

EDUCATION

B.Tech, Computer Science and Design — Maharashtra Institute of Technology (Autonomous), Chhatrapati Sambhajnagar
CGPA 7.17 | 2022 – 2026

HSC — Lal Bahadur Shastri College, Partur, Jalna | Maharashtra State Board | 76% | 2022

SSC — Vishwanath Vidyalaya, Talni, Jalna | Maharashtra State Board | 80% | 2020

PROJECTS

Smart Attendance System | Python, OpenCV, Streamlit, MySQL

- Built a contactless, face-recognition-based attendance system that replaced manual roll-call, using OpenCV for real-time face detection and MySQL for attendance logging.
- Achieved 89% face-recognition accuracy across a test group of 4 students, cutting attendance-marking time from 10 minutes to 1 minute per class.
- Designed a Streamlit dashboard for instructors to view real-time attendance logs and export reports, removing the need for manual register reconciliation.

Repository: github.com/deepesh-agrawal1/Smart-attendance-System

Patient Management REST API | Python, FastAPI, Pydantic

- Built a full CRUD REST API for managing patient records, with endpoints to create, view, update, sort, and retrieve individual patients.
- Designed Pydantic data models with field-level validation (type, range, and format checks) to enforce data integrity on every request and return structured error responses for invalid input.
- Implemented computed fields to auto-calculate BMI and health-risk category (e.g., underweight, normal, obese) from patient height and weight.
- Added query-based sorting (by height, weight, or BMI, ascending/descending) and proper HTTP status/error handling (400/404) for invalid requests.

TECHNICAL SKILLS

- **Languages:** Python, flask,html,css
- **Python libraries:** Scikit-learn, NumPy, Pandas, Matplotlib,
- **Backend:** FastAPI, Pydantic, REST API design
- **Generative AI:** LLM fine-tuning fundamentals,
- **Database:** SQL, MySQL
- **Tools:** Git, GitHub, MS Office

CERTIFICATIONS

- Oracle Cloud Infrastructure – AI Foundations
- IBM SkillsBuild – Data Science 101
